

# **Abstract**

## **Title:**

Financing of promoting physical activity by the towns with extended scope

## **Aims:**

Purpose of this work is to explore and analyze condition of financing of promoting physical activity in the towns with extended scope in Czech Republic. I am focusing on budget of towns with extended scope, analyzing of sport financing in these towns, analyzing of profit or loss of sport facilities, utilization of grants, the citizen attitude with this problem and the functionality of departments of sport.

## **Methods:**

The work is descriptively-analytical. Collecting of data is done by recherche and questionnaire. Analysis and comparison will be used for evaluation of data. I will research whether the number of population is correlated with the amount of money put into the promotion of physical activity and with the number of workers in the Sports Department etc.

## **Results:**

The towns with extended scope are recognized the importance of physical activities and they are very active to seek financial resources to support them. However, in many smaller municipalities with extended scope is not personnel involved in the sport at all, or this issue is passed on someone as a part-time. The survey revealed that the municipalities invest in to the sport up per head approximately three times more than the county. An interesting finding also is that the significant part of Sports Departments doesn't know documents focused on the benefits of physical activity and health promotion, even though they should be addressed to them.

The main problem is the lack of continuous and methodologically uniform data collection, by which would be possible to monitor the impact of physical activity on health expenditures and total externalities from them.

## **The key words:**

Financing, promotion of physical activity, towns with extended scope, obesity, data collecting, sport for everyone, budget, citizen attitude, utilization of grants, department of sport.
